

Appl. No. 10/082,822  
Amdt. dated September 11, 2003  
Reply to Office Action of March 12, 2203,

**Amendments to the Specification:**

Please replace paragraph 36 with the following amended paragraph:

[0036] A variation of system 100 may include low voltage SAH stages before HV amplifiers 7 to reduce the number of DACs 6. In other words, one group of DACs 6 is multiplexed to multiple groups of HV amplifiers 7. The conventional driver array 1-1 is not easily scalable because as the array of micromirrors 2 increases in size, the amount of wiring between control circuitry 5-1 and driver array 1-1 and the wiring (i.e., high voltage analog signal lines 4) within driver array 1-1 becomes undesirably large.
